

NEXT GENERATION TECHNOLOGY IMPROVES EMERGENCY SERVICES

PREMIERONE™
SMART PUBLIC SAFETY SOLUTIONS

Orleans Parish Communication District (OPCD) is the emergency call administration center for New Orleans, Louisiana, a city with approximately 370,000 citizens and host to millions of tourists each year. OPCD handles more than 1 million 9-1-1 calls annually, routing requests to police, fire, and emergency medical services (EMS) personnel in the field. Since it was established in 1982, OPCD has deployed innovative solutions to continually upgrade their ability to respond and to streamline workflows.

CUSTOMER PROFILE

- Orleans Parish Communication District
New Orleans, Louisiana

- Emergency response
- Public safety

- PremierOne CAD
- PremierOne NG9-1-1 Call Control
- PremierOne Mobile

- Improved response time and safety
- Optimized efficiency and workflow
- Future proof platform

ORLEANS PARISH AT-A-GLANCE

Serves
370,000
citizens

Hosts

1 million annually

WE WANTED A NEXT-GENERATION PLATFORM TO KEEP OUR EMERGENCY PERSONNEL SAFER AND TO GIVE THE CITIZENS A WAY TO GET THE FAST, EFFECTIVE EMERGENCY RESPONSE THEY DESERVE."

Stephen Gordon,
Executive Director of OPCD

THE CHALLENGE

With the growing volume of 9-1-1 calls that the Orleans Parish Communication District handles each year, OPCD wanted a way to respond faster and more efficiently to emergencies by improving the flow of information between citizens, multiple agencies, and first responders.

To gain these efficiencies, OPCD needed to reduce manual processes. The evolution started with a Computer Aided Dispatch (CAD) system in the 1990s that replaced most handwritten records. More recently, the district looked for ways to streamline workflow for dispatchers by connecting disparate applications and data sources, including the CAD systems currently in use by the police, EMS and fire departments.

OPCD also needed a future-proof platform. In the past, the district's challenges included a growing number of landline calls followed by a transition to cellular communication. By the time Hurricane Katrina hit in 2005, OPCD had implemented a state-of-the-art system for locating wireless callers. Rebuilding after the devastating hurricane and flooding from the failure of the federal levee system, OPCD faced even more challenges. "We took 40 years to get from the first 9-1-1 landline calls to handling cellular," says Stephen Gordon, Executive Director of OPCD. **"But in the eight years since Katrina, we have texting, video conferencing, and social media; and people expect to use all of those technologies to access 9-1-1."**

As a result, OPCD needed a solution that could easily handle multiple types of data, including structured database files and unstructured information such as text messages. Ultimately, OPCD required a platform that would help it stay on top of emerging technology trends, as well as work with existing systems. Director Gordon concludes, **"We wanted a next-generation platform to keep our emergency personnel safer and to give the citizens a way to get the fast, effective emergency response they deserve."**

"WE'VE ELIMINATED INFORMATION SILOS AND ENSURED THAT THE RIGHT DISPATCHER AND RESPONDER IMMEDIATELY RECEIVE THE INFORMATION NEEDED."

Karl Fasold,
System Administrator, OPCD

THE SOLUTION

OPCD DECIDED TO IMPLEMENT A PREMIERONE™ CAD SYSTEM WITH NG9-1-1 INTEGRATED CALL CONTROL.

The new integrated PremierOne solution consolidates multiple police, fire and EMS data streams into a single 9-1-1 call system. It features a data warehouse for quick access to incident history and pulls everything together into a single application data display. The system automatically routes incident reporting to the most appropriate dispatchers, and continually updates situations as they progress, pushing data to the field on tablets and mobile computers.

PremierOne integrated call control eliminates the "swivel chair" methodology for call takers, allowing them to use one keyboard and one mouse for all of their workflows.

PremierOne also automatically routes calls to the appropriate dispatcher and alerts the closest first responders, who see the incoming information in real time. OPCD fields calls to sixteen police, three EMS, and four fire dispatch positions that handle calls throughout the city.

 **“THE SYSTEM HAS NOTICEABLY IMPROVED THE WORKFLOWS FOR OUR CALL TAKERS AND DISPATCHERS, WITH RESPONSE TIMES CONSIDERABLY FASTER THAN THE OLD SYSTEM.”**

Karl Fasold,
System Administrator, OPCD

“We have a set of rules built into the system that identify the type of call, the locations, and the personnel and resources required,” explains System Administrator Fasold. “For example, if the call is routed to the fire department, PremierOne™ CAD determines the closest station with available equipment and manpower.”

The calls are also cross-referenced with historical data and a mapping system. The system notifies the dispatchers and responders of prior incidents at an address or with a person. Multiple calls about the same incident are handled as database transactions and are automatically synchronized and aggregated in a single report.

On the back end, the data warehouse pushes information to paramedics, who access the data on tablets. The paramedics then use the tablets to log additional details about the patient or incident. The system works similarly with mobile terminals used by police units sent to stabilize a scene. With one touch, officers can indicate if the scene is safe, or if they need immediate help. The PremierOne CAD also integrates with the police department’s Corona Solutions, a system that is used to strategically allocate resources to patrol areas, identify crime hot spots, and aid other planning. The system shares data between agencies through a local area network (LAN) managed by the city. The city also gives external public safety vendors access to PremierOne CAD data through a secure VPN connection. Moving forward, OPCD is now prepared to integrate text, pictures, and video within PremierOne CAD.

THE RESULTS
IMPROVED RESPONSE TIME AND SAFETY WITH REAL-TIME INFORMATION

By seamlessly connecting applications and automating the flow of information, OPCD has transformed operations and improved safety for first responders and citizens. **“With a PremierOne CAD solution based on next generation technology, we’ve eliminated information silos and ensured that the right dispatcher and responder immediately get the information needed,”** says Fasold. “So while you’re on the phone to a 9-1-1 telecommunicator describing the guy breaking into your car, the call has already gone out to nearby police units with your location and other details, including your own real-time observations and any history of prior incidents.”

“THE BACK END IS SO EXTENSIBLE THAT I CAN INTEGRATE NEW TECHNOLOGIES AND DATA TYPES SUCH AS TEXT MESSAGES WITHOUT HAVING TO IMPLEMENT A BRAND NEW SYSTEM OR UPGRADES.”

Karl Fasold,
System Administrator, OPCD

FUTURE-PROOF PLATFORM WITH SIMPLIFIED WORKFLOW AND DATA ENTRY

OPCD has designed an innovative solution that easily adapts to new technology trends. “This is a future-ready solution for many reasons,” says Fasold. “The back end is so extensible that I can integrate new technologies and data types such as text messages without having to implement a brand new system or upgrades.”

With public safety on the line, one of the most crucial performance factors of a 9-1-1 system is reliability.

In addition to improving safety and reducing response times, the solution has improved efficiency for dispatchers and other staff, who can see current information from EMS, fire, and police departments on a single screen. System Administrator Fasold says, “With a standardized solution, up-to-date information refreshes constantly across multiple systems, so that all responders have the same view of the information at all times.”

The solution saves time and reduces errors by automatically sharing data among disparate systems. “If EMS need police on the scene, they can request help in a few keystrokes by using the CAD system,” says Fasold. “They no longer have to call a dispatcher, who would then manually type in the information and initiate an incident for dispatch. That process increased response time and carried the potential for error. Because the incident data is coming directly through the CAD, the correct location has already been mapped and identified for even better accuracy.”

“SINCE WE BEGAN WORKING ON THE SYSTEM, WE HAVE HAD APPROXIMATELY ZERO DOWNTIME”

Karl Fasold,
System Administrator, OPCD

TRANSFORM THE WAY YOU RESPOND AND CONNECT UNLOCKING THE FULL POTENTIAL OF AGENCIES WITH SMART PUBLIC SAFETY SOLUTIONS
